

# Request for Pressure Regulator Periodic Inspection

To: Person in charge for handling Gas Corrosion Tester

Thank you for using our gas tester and your patronage extended to our product.

This is to request you to have a periodic inspection for pressure regulator installed in the standard gas.

## In the case of using pressure regulator continuously

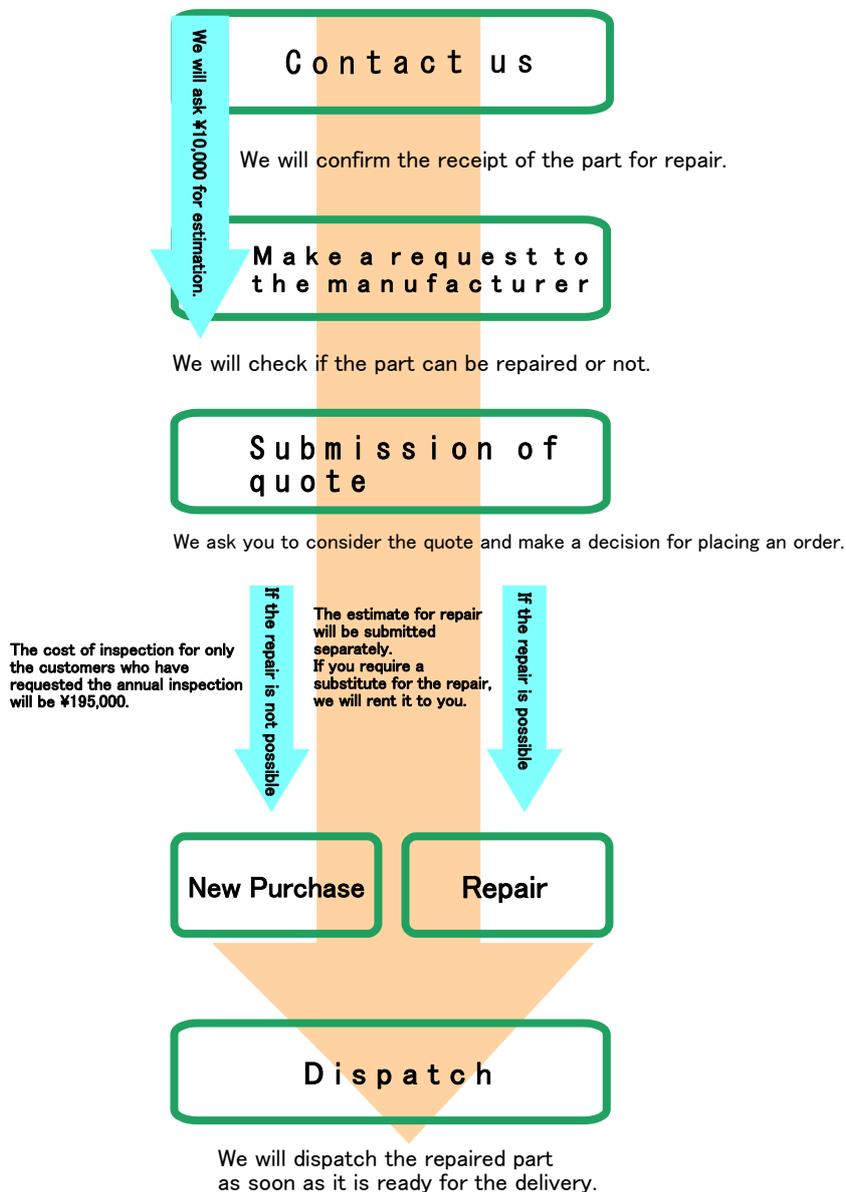

**Danger**.....

**Gas leakage occurred!?**

It is very dangerous to use this continuously without having a periodic inspection.

**Before gas leakage happens,  
we recommend you to have a regular inspection  
at the manufacturer !!**

In the case that you contact us for the inspection, following steps will be taken.

Gas leakage has been occurred caused by the trouble of pressure regulator.

We have been conducting the gas leakage check at the time of the periodic inspection of gas corrosion tester.

However, there may be a risk of sudden gas leakage due to the internal corrosion of the pressure regulator, the usage frequency and the deterioration status.

The periodic inspection can be done only by the manufacturer so that we can't neither disassemble and nor repair the regulator.

Gas leakage is very dangerous that we request you to have the manufacturer check as early as possible. In addition, if the pressure regulator is used over two years, the trouble or damage will not be covered by our warranty.

Those customers who want to have an inspection, we would appreciate it if you would contact us.

The inspection will be charged and if the trouble or damage cannot be repaired, you may be necessary to purchase a new one.

As to the inspection and purchase of new one, we will issue quote and submit it each time.

As for the purchase of new regulator, it is perfectly fine for the person in charge to purchase directly.

\* Please be noted that we will not be responsible at all for the accident(s) occurred at the gas leakage.
